

DM/K Duomatt

Product information

The DM/K labeling material, in mat size 139x139 mm, has been developed especially for the Pulsar laser printer.

For laser inscribing of Duomatt (DM/K), you must scrub the exhaust air or route it outside (observing statutory provisions) as a precautionary measure to ensure that the strong odours that the machine can produce do not endanger the health of employees. An external extraction system can be connected directly to the MP laser labeling system using an adapter.

Only Duomatt with an outer layer in „Siemens silver“ (SSI) can be laser inscribed.

- Double-layer material with a coloured outer layer in various colour combinations
- Optionally available with self-adhesive foil (SK) or with adhesive foil (HF).
- Available in square versions with and without corner radius, in round versions (circular blanks), optionally with holes, slots or granulation
- UV resistant outer layer
- Thickness: 0.8 mm
- Inscription technique: Lasers
